PixelRPGCursors — Lite

A pixel art cursor set for RPG-style games. This free sample holds two cursors from the full set of 35, at 32 px and 64 px.

What's Inside

File	Description
`UI_Cursor_Attack`	Crossed swords — one of 18 RPG action cursors
`UI_Cursor_Wait_01` … `_04`	Hourglass, 4-frame loop

Each is supplied at **64 px** and **32 px**. Both are the same artwork at different sizes, not different drawings.

Hotspots

The hotspot is the pixel that actually clicks, measured from the top-left of the image. Both sizes are listed so you can use the values directly — no measuring, no halving.

Cursor	64 px	32 px
Attack	10, 6	5, 3
Wait	32, 32 (centre)	16, 16 (centre)

Which Size to Use

Display scaling	Use
100 %	32 px — matches the system cursor
125 % and above	64 px — 32 px looks small next to scaled UI

> **Never scale by a non-integer factor.** Pixel art blurs at 1.5× and similar. Scale by whole numbers with nearest-neighbour filtering only — never bilinear.

Using Them

Unity

```
Cursor.SetCursor(tex, new Vector2(10, 6), CursorMode.ForceSoftware);
```

Import settings must be: Texture Type **Cursor**, Filter **Point**, Compression **None**, **Read/Write Enabled** on, mipmaps off. Unity rejects the texture otherwise. `ForceSoftware` keeps the pixels exact — with `Auto`, Windows rescales the cursor to the system cursor size.

Godot

```
Input.set_custom_mouse_cursor(tex, Input.CURSOR_ARROW, Vector2(10, 6))
```

Web / CSS

```
cursor: url("UI_Cursor_Attack_64.png") 10 6, auto;
```

Animating the hourglass

Engines accept a static image only, so the loop has to be driven by your own timer. Swap the frame every 0.12–0.15 s in file order and repeat.

```
// pseudocode
frame = floor(time * 8) % 4;
setCursor(waitFrames[frame], 32, 32);
```

Free to use in commercial and non-commercial projects, and free to modify. Credit is appreciated but not required. Reselling or redistributing the files themselves, original or modified, is not permitted.

The full pack contains 35 cursors in two colour sets (gold/burgundy and gold/teal), at 32 px and 64 px, with pressed states for 25 of them and four animated cursors. A Unity edition adds a runtime cursor manager, DPI-aware size switching and editor tools for hotspot verification and one-click import fixes.

Thank you for downloading. If these end up in your project, a short comment on the page genuinely helps — it is what keeps sets like this coming.
